

第 3 章作业 2: SQL (2026 春)

序号: 10 学号: 2023112451 姓名: 顾雨航

一、解答题

1. 使用product-db.sql中的 SQL 语句创建关系数据库 Product-DB, 使用 SQL 完成下列查询。

(a) Find the PC model with the highest available speed. (使用外连接查询)

```
select distinct p1.model from
pc as p1 left outer join
pc as p2 on p1.speed < p2.speed
where p2.speed is null
```

(b) Find the PC model with the highest available speed. (使用含有 IN 的嵌套查询)

```
select distinct model from pc where
speed in (select max(speed) from pc);
```

(c) Find the PC model with the highest available speed. (使用含有 = 的嵌套查询)

```
select distinct model from pc where
speed = (select max(speed) from pc);
```

(d) Find the PC model with the highest available speed. (使用含有 >= 的嵌套查询)

```
select distinct model from pc where speed >= all
(select speed from pc);
```

(e) Find the PC model with the highest available speed. (使用含有 EXISTS 的嵌套查询)

```
select distinct model from pc as p1 where
not exists (select * from pc as p2 where p1.speed < p2.speed);
```

第 3 章作业 2: SQL (2026 春)

序号: _____ 学号: _____ 姓名: _____

一、解答题

1. 使用product-db.sql中的 SQL 语句创建关系数据库 Product-DB, 使用 SQL 完成下列查询。

(a) Find the PC model with the highest available speed. (使用外连接查询)

(b) Find the PC model with the highest available speed. (使用含有 IN 的嵌套查询)

(c) Find the PC model with the highest available speed. (使用含有 = 的嵌套查询)

(d) Find the PC model with the highest available speed. (使用含有 >= 的嵌套查询)

(e) Find the PC model with the highest available speed. (使用含有 EXISTS 的嵌套查询)
